

APPENDIX G

SOCIOECONOMICS

This page is intentionally blank.

1 G.1 ANALYSIS METHODOLOGY

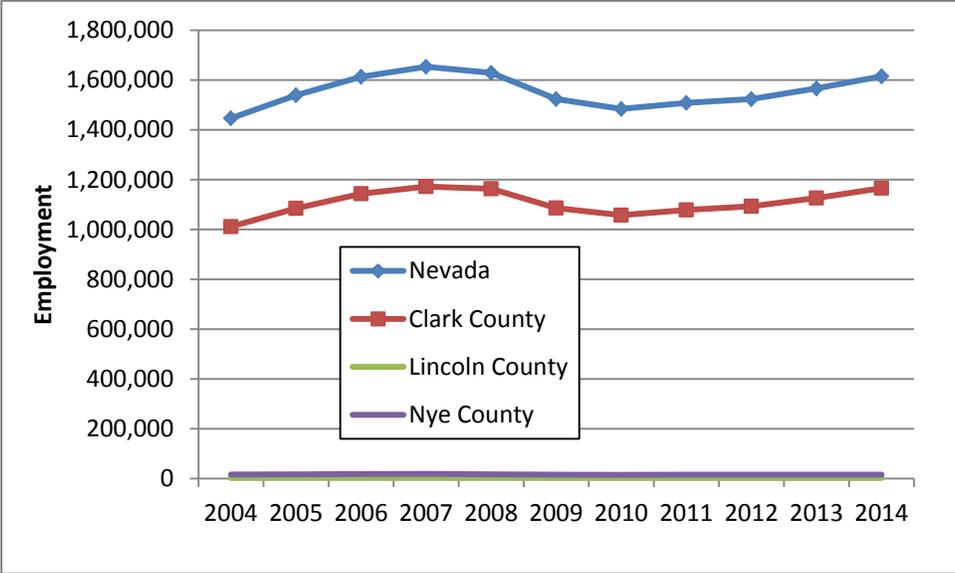

2 The primary goal of the Economic Impact Assessment (EIA) is to place an economic
3 value on the Proposed Action. A commonly-used technique for conducting EIA is
4 through the application of input-output (I-O) models. I-O models track the flow of
5 income through the economy to measure the impacts on different industries. The I-O
6 model estimates the change in expenditures and in employment that result from a
7 proposed change in economic activity (such as not extending the NTTR land
8 withdrawal) and then applies the changes in employment and expenditures to estimate
9 total changes for each industry.

10 The Nellis AFB EIA model takes into effect that purchases from one industry may result
11 in that industry purchasing services, parts, or other inputs from a different industry. In
12 estimating these ripple effects from the change in NTTR activities on the region, the I-O
13 models incorporate multipliers that reflect the total economic impact changes resulting
14 from the change in the direct purchases and expenditures from the changes in activities
15 at NTTR. The multipliers used in the EIA model determine the amount that each
16 industrial category spends within each industrial category. This relationship between all
17 industries is referred to as an I-O table, which can then be applied to estimate the
18 impacts on other industries when expenditures have changed within the regional
19 economy.

20 The three types of economic impacts from changes in the utilization of the NTTR can be
21 summarized as:

- 22 • **Direct Impacts.** The economic changes in the impacted industry, i.e., the
23 employment, income (payroll) paid and economic output related to the changes
24 in the use of the NTTR and proposed expansion areas.
- 25 • **Indirect Impacts.** The changes in the local business sector as a result of the
26 changes in demand from the directly affected industry. In this case, indirect
27 impacts relate to the employment, income, and economic output related to the
28 purchases of goods and services by the activities related to the NTTR and
29 adjacent lands.
- 30 • **Induced Impacts.** Changes in employment, income, and economic output
31 related to the changes in spending of the incomes earned through the direct and
32 indirect expenditures.

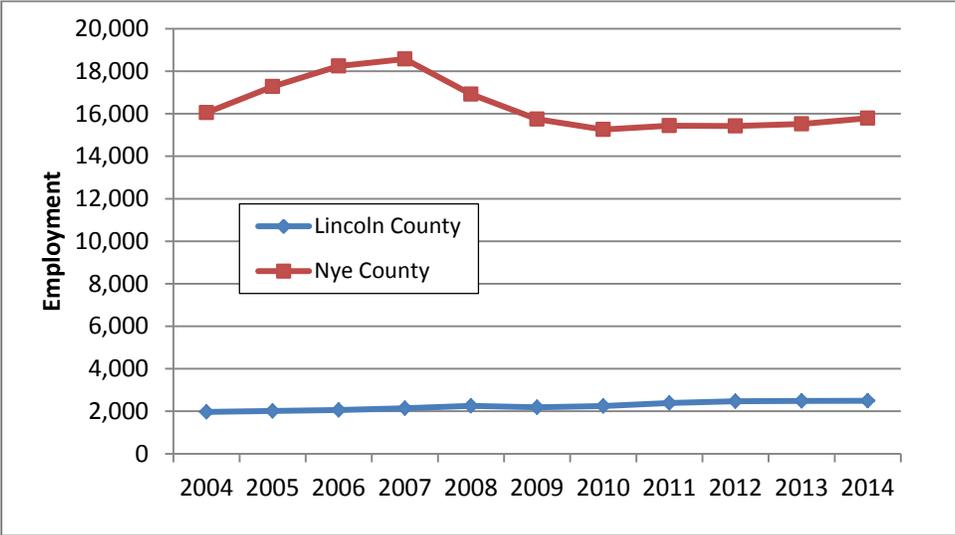

33 The EIA for Nellis AFB, Creech AFB, and the NTTR estimates the total impact from its
34 current operations by establishing a baseline that represents the proposed Status Quo
35 alternative (Alternative 1). Using the Status Quo as the baseline allows a comparison of
36 the impact from the changes in economic activity that would potentially result from the
37 proposed action alternatives and the No Action Alternative.

(Note: Nye County and Lincoln County are nearly identical.)
